Experience

C++ Programmer, Catness Game Studios Jan 2023 – Feb 2025

- Implemented the leaderboard service for any console platform in 2 days by developing previously a custom plugin in C++ for Unreal Engine
- Adjusted thousands of LOD properties in 1 hour by developing a tool in C++ to edit them in batches
- Achieved substituting 700 old dialogue audios with new ones corresponding to their new subtitles in 1 day by developing a tool in C++ for Unreal Engine
- Ported Sea Horizon for PS4, PS5 and Xbox in 3 months by first solving the complex tasks using Unreal Engine
- Ported Hell of an Office for PS4, PS5 and Switch in 6 months by working with the team using custom plugins
- Ported Genie Reprise for PS4, PS5 and Xbox in 2 months by using Scrum and custom tools in C++

Skills

Languages: C++, C

Technologies: Dear ImGui, OpenGL Mathematics, EnTT, GLFW, Spdlog, Stb_image, Glad, OpenGL, Vulkan

Software: Unreal Engine 5, Unreal Engine 4, Perforce Helix Core, RenderDoc, TeamCity

Projects

Game Engine in C++ with OpenGL github.com/GomezJuanJose/ModelOne

- Developed a first game engine to learn the basic concepts, programmed a layered architecture and implemented subsystems such as physics, renderer, ECS and events in 1 year
- Tools Used: C++17, OpenGL, GLFW, Glad, OpenGL Mathematics, Dear ImGui, Stb_image, Premake5

Game Engine in C with Vulkan JuanJoseGomezSimon.github.io/post/cenginevulkan/

- Programmed a basic version of the first game engine, made from scratch in C with an efficient architecture by applying a data-oriented paradigm
- Tools Used: C, Vulkan, Make, Stb_image

Education

Universidad Jaume I, BS in Game Desing and Development

2023
